Operators overload

Enable comparision between two objects.

C++

```cpp
class MyClass {
    int value;
public:
    MyClass(int val) : value(val) {}

    bool operator< (const MyClass& other) const {
        return value < other.value;
    }
};
```

Java

```java
class MyClass implements Comparable<MyClass> {
    int value;

    public MyClass(int value) {
        this.value = value;
    }

    @Override
    public int compareTo(MyClass other) {
        if (this.value < other.value) {
            return -1;
        } else if (this.value > other.value) {
            return 1;
        } else {
            return 0;
        }
    }
}
```
